Dear Sir,

Sub: Looking for qualified team who can work for our organization's project.

I'm **Mr.G.JAGADEESHWARA RAO**, Managing Director of Crystal Mangement Services which is located at Visakhapatnam in Andhra Pradesh, India

Offering the ideal platform, for creative thinkers for creative thinkers to design and develop new drug entities. we guarantee incredible opportunities in different Pharmaceutical industries. With the best infrastructure, Technology, Equipments, and system support in its class, the innovators have nothing to be worried about. In particular, we offer cutting-edge facilities for improving instrument handling skills.

In addition to offering training and project development. we also offer consultancy and help with Characterization of Prepared formulations Formulate and evaluate. For aspiring Pharmacy researchers, our fund also acts as a catalyst to encourage the technological advancement. Therefore, if you have an idea, which you think is innovative then we are the right place where you can implement it

We are looking for a team of qualified faculty members at your college in Pharmacy Department who can work on analytical research and development and formulation research and development. If your college is interested to work in collaboration. We forward further documentation & I sincerely hope that we can keep the information confidential

Looking forward & thank you

Mr.G.JAGADEESHWARA RAO

Respected sir,

Sub: Req- Project Development-Acceptance -Reg

It gives us great pleasure to let you know that the project proposal for "**Artificial Neural Networks in the dissolution enhancements of BCS Class-II drugs**" has been confirmed. As we discussed in our conversation, we agreed to maintain the confidentiality of the Project. We appreciate you giving us the opportunity to work on your current project, which has to do with the most recent developments in the design sector.

Please be assured that we will make every effort to complete the project as quickly as we can.

Thanking you,

Flow chart of Project Procedure

Objectives:

- To carry out modelling by artificial neural networks and use them in the characterization of prepared formulations and in the selection of the best product.
- To formulate an immediate release tablet of Clopidogrel bisulphate and Dolutegravir sodium based on the optimized formulation given by the ANN.
- To evaluate the prepared immediate release tablet of Clopidogrel bisulphate and Dolutegravir sodium by *in-vitro* studies

WORK ORDER

Date: 08-12-2020

Visakhapatnam

To
The Principal
Avanathi Institute of Pharmaceutical sciences, Cherukupally,
Vizianagaram.

Dear Sir,

Sub: Request –Applicability of Artificial Neural Networks in the dissolution enhancement of BCS class –II drugs - Reg

To carryout modelling by Artificial Neural Networks and use them in charecterization of Prepared formulations as per telephonic discussion quotation we are pleased to place Work Order as below

Requirements	Amount(in Rs.)
Chemicals & Solvents	1,00,000/-
Equipments & Glassware	1,30,000 /-
Artificial Neural Network Software	1,20,000 /-
BCS Class II Drug Molecules	1,00,000/-
In-Vitro Pharmacological Studies	50,000/-
Total Cost in rupees	5,00,000/-

Rupees in words :Five Lakhs Only

Work Order Valid: One year (8th Dec 2020 to 31st Nov 2021)

WORKING LOCATION:

- Your Premises

Project Report

Introduction:

The project aims in formulating a product that gives the required release of the drug which then gets absorbed in an appropriate manner to give maximum possible bioavailability as oral route is the most preferred route of drug administration, from the perspective of the patients as well as the doctors. Oral solid formulations and especially tablets are preferred by one and all because of their several advantages. The primary objective of the project is to formulate an immediate release tablet of Clopidogrel bisulphate and Dolutegravir sodium based on the optimized formulation given by the ANN and to evaluate them by *in-vitro* studies.

Scope of the Project:

An extensive amount of recent research has gone into methods to enhance the dissolution rate of poorly soluble drugs. This research project is involved in enhancing the solubility and developing formulations that enhance the dissolution rate of two poorly soluble drugs, namely, Clopidogrel bisulphate (CBS) and Dolutegravir sodium (DTG) by using cyclodextrins as complexing agent with the application of Artificial Neural Networks (ANN).

Project planning and scheduling:

This research project was started with the aim of enhancing the solubility and consequently the bioavailability of the two selected BCS Class II drugs. Experimental work was carried out to achieve the objectives listed above. An introduction to the main topics in the research project, literature review, experimental procedures adopted, results obtained and discussions containing the interpretation of the results, usage of artificial neural networks to get at the optimised product will be effectively developed and ensure on-time project delivery.

Methodology:

It was envisaged to enhance the solubility of the drugs, by preparing inclusion complexes of the drugs with cyclodextrins and to enhance it further by adding hydrophilic polymers to the complexes. The cyclodextrins selected for the study were β -CD and HP- β -CD. The hydrophilic polymers selected were polyvinyl pyrrolidone K30 (PVP K30), poly ethylene glycol 6000 (PEG 6000) and polyvinyl caprolactam-polyvinyl acetate-polyethylene glycol graft copolymer (Soluplus). All the selected excipients are well known agents in causing enhanced dissolution of drugs.

Use of statistical techniques and optimization methods that rely on response surface methodology is nowadays a well-known practice in formulation development. But when the number of inputs increases, statistical conceptualization and optimization techniques become unmanageable. Further, statistical techniques need a hypothesis to generate a suitable model.

Technology and tool Used:

Artificial neural networks (ANN) are going to be a better working tool or modeling tool. The ANNs are computational algorithms implemented by computer software that study data in a manner similar to the human brain. They try to learn, extrapolate and extract the basic logic or meaning or trend of the data. ANNs comprise of different processing nodes. These nodes are skilled in taking out non-linear relationships from the input data and using the knowledge in predicting the outcome from the preferred situation. ANNs are very beneficial. ANNs do not depend on rigidly organized experimental designs. They use past or incomplete data and can map functions.

A two-layer artificial neural network, named, Levenberg-Marquardt Algorithm was proposed to be studied for applicability in the characterization of the developed formulations and in the selection of the best formulation in the present research project.

Budget:

A budget will be estimated to cover the costs of human resources, ANN software, selected BCS Class II drugs, Chemicals, reagents, statistical techniques and other miscellaneous expenses.

Risk Management:

A risk assessment will be conducted to identify potential challenges such as data inaccuracies, result analysis and time constraints. Extenuation plans will be developed to minimize these risks effectively.

Conclusion:

The application of artificial neural networks in formulation development of Clopidogrel bisulphate and Dolutegravir sodium complexes. In this study, ANNs were used as a machine learning technique to evaluate the influence of cyclodextrins (β -CD, HP- β -CD) on dissolution enhancement of CBS and DTG with and without hydrophilic polymers (PVP K30, PEG 6000 & SOLUPLUS. A trained ANN model was employed to predict release profile and optimize the formulation composition based on the percentage of the drug released. The network performance was validated by the regression data which validates the network output with respect to training, validation and test sets and a good fit shows the network outputs are almost equal to targets with minimum error. The successful completion of project will significantly benefit the pharmaceutical industry by providing reliable results.

UTILITY CERTIFICATE

We the principal investigator and Co-investigators hereby certify that the work order for "Artificial Neural Networks in the dissolution enhancements of BCS Class-II drugs", as per the discussed quotation and telephonic conversation, has been placed with e respective party.

The details of the work order as follows:

Requirements	Amount (in Rs.)
Chemicals & Solvents	1,00,000/-
Equipments & Glassware	1,30,000 /-
Artificial Neural Network Software	1,20,000 /-
BCS Class II Drug Molecules	1,00,000/-
In-Vitro Pharmacological Studies	50,000/-
Total Cost in rupees	5,00,000/-

We confirm that the before mentioned rates are reasonable and necessary for carrying out the mentioned tasks efficiently. We assure you that these rates will be utilized in the best possible manner to achieve optimal results in this project. Furthermore, we ensure complete transparency and accountability in all our financial transactions related to this project.

Please let us know if any additional information is required from our end .We look forward to your continued support and cooperation.

R&D Circular

Sub: Seed Money Sponsorship for R&D Projects

An R&D project involving a regular faculty member or team of faculty members will be given a seed budget of no more than Rs. 15,000 per project. The approval of seed money for an application project will depend on review by a committee that the principal has constituted. To apply for seed money in this regard, all faculty members must deliver a hard copy of their project proposals to the principal by no stretch of time than November 15, 2021. Please get in contact with the HOD of Pharmacy department for further details. The smooth functioning of the plan will be the responsibility of the R&D coordinators.
