Abstract

Plant extracts have been used as a source of medicines for a wide variety of human ailments. the . Phytochemical analysis of flowers of ornamental plants of *Chrysanthemum indicum* L. and *Calendula officinalis* are very useful in identifying new sources of therapeutically important compounds like saponins, terpenoids, flavonoids and steroids are present in the flower extract of *Chrysanthemum indicum* L and carbohydrates, flavonoids, terpenoids are present in the flower extract of *Calendula officinalis* . *Chrysanthemum indicum* L :Hindi :Guldaudi, Sanskrit : Bahupatrika, Odiya: Shevathi *Calendula officinalis*: English : Marigold ,Hindi : Genda.

Keywords: Phytochemical Analysis, flowers, *Chrysanthemum indicum* L, *Calendula officinalis*.

their structure or testing in laboratory model systems, such as cell cultures, in vitro experiments, or in vivo studies using laboratory animals. Challenge in that field include isolating specific compounds and determining their structures, which are often complex, and identifying what specific phytochemical is primarily responsible for any given biological activity. Phytochemicals are chemicals produced by plants. These are the chemicals that plants use to defend themselves against disease [1,2].

Extraction methods involved in this project are Maceration, Percolation, Soxhlet Extraction, Supercritical fluid extraction, Microwave assisted extraction, Ultrasound assisted extraction, Accelerated solvent extraction. The formation of yellow colour indicated the presence of flavonoids while the brown colour formation indicated the presence alkaloids and terpenoids. The phenol content was maximum in roots (82.13 mg/gdw) followed by seed, leaf, stem and fruit.

Introduction

Phytochemical screening refers to the extraction, screening and identification of the medicinally active substances found in plants. Some of the bio-active substances that can be derived from plants are flavonoids, alkaloids, carotenoids, tannin, anti-oxidants and phenolic compounds. Phytochemists study phytochemicals by first extracting and isolating compounds from the origin plant, followed by defining
