7.1.2: The Institute has facilities and initiatives for

1. Alternate sources of energy and energy conservation measures
2. Management of the various types of degradable and non-degradable waste
3. Water conservation
4. Green campus initiatives
5. Disabled-friendly, barrier free environment.

INDEX

3. Water conservation

WATER CONSERVATION

1. RAIN WATER HARVESTING:

Rainwater harvesting refers to the process of collecting and storing rainwater for future utilization. This method entails capturing rainfall from various surfaces, such as rooftops, and storing it in tanks or underground reservoirs. By adopting this practice, water conservation is promoted, runoff is minimized, and it serves as a sustainable solution for irrigation, domestic consumption, and replenishing groundwater levels. Rainwater harvesting involves either storing rainwater in natural reservoirs or tanks, or allowing surface water to infiltrate subsurface aquifers before it is lost as runoff. The monitoring and control of the rain water harvesting system is overseen by the faculty and a dedicated team of students from the Avanathi institute of pharmaceutical sciences.

2. BORE-WELLS:

To fulfill the water scarcity needs at the institute, we offer the following solutions.(bore wells).

There are bore wells installed near the campus namely

1. A bore well is installed near the B and H block with capacity of 1.5HP motor capacity.
2. A bore well is installed near pharmacy canteen with capacity of 1.5HP motor capacity .
3. A bore-well is installed near the pharmacy laboratory with capacity of 2HP.
4. A bore-well is installed near the PharmD laboratory with capacity of 2HP.

S.No	Bore Well Capacity	Location	Bore Well Depth
1.	1.5HP	Pharmacy block	220
2.	1.5HP	Pharmacy canteen	140
3.	2HP	Pharmacy laboratory	180

3. WATER TANKS:

The collection and restoration of purified water in Syntex tanks with a capacity of 2500 liters is achieved through the utilization of osmosis technique. This water can then be distributed through pipelines for both drinking purposes and regular usage, such as in washrooms and laboratories. Additionally, this water is utilized for maintaining the health of trees, plants, and the green landscape within the campus, contributing to a healthy environment.

4. WASTE WATER RECYCLING:

Water recycling, also referred to as water reuse, entails the purification of wastewater to render it appropriate for diverse drinking purpose and non-drinking applications such as irrigation or even replenishing underground water sources. This method presents a sustainable solution to combat water scarcity and minimize environmental repercussions. AIPS provides a water purifier and a waste water recycling system that efficiently recycles water. Generally, it functions by utilizing reverse osmosis, a technique that extracts clean water from polluted or saline water by applying pressure on the water through a membrane.
