Incubation centers are dedicated facilities or programs that offer valuable resources and assistance to aspiring entrepreneurs, particularly university students and alumni. These centers aim to support the development of viable business ideas, secure funding, and successfully launch these ideas into the market. They also provide essential support and guidance to students throughout the entire process, utilizing the expertise of entrepreneurial mentors. Additionally, these centers organize Faculty Development Programs (FDPs) for nearby college faculty members and provide internships and project opportunities to students from these colleges. The College management expressed their gratitude to Mr. G. Jagadeeswar Rao from JS Skill Solutions and Mr. T. Srinivasa Reddy, Managing Director of Rainbow Labs, for their collaborative efforts in these endeavors.

TABLET PUNCHING MACHINE

It is basically used for making a wide variety of tablets in a uniform shape and different sizes from the different types of materials like powder form and many more. The research Scholars used for testing the physical properties of pharmaceutical active ingredients and excipients. The different formulations often come in tablet form, by utilizing tablet punching machines where it can be coated with multiple layers. educational institutions and training centres mainly focus to teach students and professionals about tablet manufacturing processes. It will be helpful to create prototype tablets for various experimental and research purposes. The powder form given by the 2nd party would be converted into tablet form by 1st party.

SIEVE SHAKER

The vibratory sieve shakers of the series AS 200 are used in research & development, quality control of raw materials, interim and finished products as well as in production monitoring. The controllable electromagnetic drive offers an optimal adaption for every product. Sharp fractions are obtained even after short sieving times. The AS 200 basic sieve shaker is the economical alternative of the series with familiar RETSCH quality and reliability. It features digital setting and display of performance and time.

BIOANALYSER

The Bio analyser system enables rapid, accurate and reproducible analysis of the quality. These instruments typically determine levels of albumin, alkaline phosphatase, aspartate transaminase, blood urea nitrogen, bilirubin, calcium, cholesterol, creatinine, glucose, inorganic phosphorus, proteins and uric acid in blood stream or bodily samples. It would meet the needs of researchers in all areas of analyzing.

LATEST SMART APPLICATIONS

Latest smart applications like AI tools for drug design, CADD application, SAS application, macromedia software's for the real time developments in drug design and method developments.

In addition to the above, some more applications related to Pharmacy will be added in due course of time for the hands-on experience for the utilization of all Specializations of Pharmacy students for the development and presenting innovative thoughts and ideas.

The students and faculty would work on HPLC quantitative determination of plasma levels of drugs and their metabolites for project and research works respectively. This is of special importance during the development of new drugs and for monitoring therapy. This would be applicable to a much greater variety of mixtures, including non-volatile molecules. This chromatographic techniques used for method development and simultaneous estimation of drugs by reverse phase mode and it would play an important role in finding and isolating the active ingredients. in quality control of raw materials getting from labs. It is one of the choices for analyzing materials the wide range of organic compounds. The sample given by 2nd Party for the evaluation of metabolites.

DISSOLUTION APPARATUS

This is helpful in student projects that teaches theory and application by applying for evaluating solid and semi solid dosage forms as well as oral suspensions. It is utilized for testing the quality and consistency of drug products and used to monitor their stability over time, assessing whether changes in storage conditions affect drug release characteristics. It is applied for food and cosmetics, to assess the release of active ingredients from various products. In academic research this is utilized to assess the performance of novel drug formulations and investigate drug release mechanisms. The sample given by 2nd party would be assessed by 1st party.

LAMINAR AIRFLOW (LAF)

Laminar airflow (LAF) refers to the controlled, unidirectional airflow of highly filtered air in a confined area, typically within a laminar flow hood or cabinet. Laminar airflow is crucial in aseptic processing environments, where it provides a sterile workspace for the filling and packaging of pharmaceutical products, ensuring product safety and quality. It is used by faculty for the research purpose to conduct experiments and tests on sensitive materials, where contamination could affect results, and also used to teach students about sterile technique and microbiological procedures, making it a fundamental tool in pharmaceuticals, healthcare, research, and manufacturing.
